Noah’s circle, Shem’s half-side

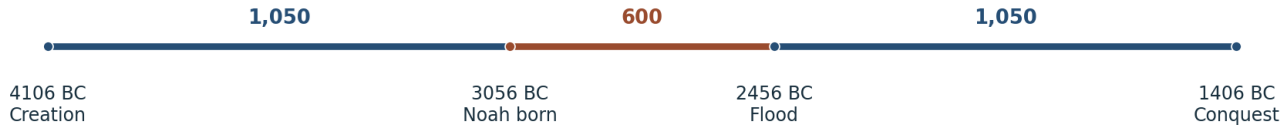

Lamech names Noah in hope of relief from the ground cursed at the Fall. Noah is six hundred when the waters come. God preserves his household, sets the bow in the cloud and carries the promise through Shem’s family. On the regular Rounded MT line, Creation, Noah’s birth, the Flood and the Conquest enclose **1,050 + 600 + 1,050** years. Creation to Flood and Noah to Conquest each measure 1,650. Their sum counts Noah’s 600 twice and gives a working circumference of 3,300 on a diameter of 1,050, or **22/7 for π**.

Three such circumferences equal 9,900. On the cumulative Moses line, Creation at 14006 BC is 14,000 years before the study’s 6 BC Nativity. Half gives the square’s side of 7,000. The 9,900 to regular Creation gives its working diagonal, with **140/99 < √2 < 99/70**. Shem supplies the dated join. His cumulative 5436–4836 BC lifespan moves forward 2,380 years at both ends to Noah’s 600. From its own Flood/Arphaxad boundary at 4836 BC to Aaron-line Jacob/Levi at 1936 BC are 2,900. Circle and square thus contribute their two differences, **600 + 2,900 = 3,500**, half the side.

Noah’s circle and Enoch’s square

Each row has its own scale. Widths give elapsed years between dated boundaries.

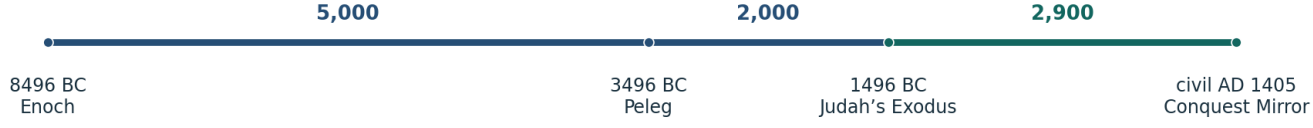

Regular Rounded MT · 2,700 elapsed years

Cumulative Rounded MT · 3,500 years, half the side

Enoch’s working diagonal · 9,900 years

Peleg’s division leads to Jared’s Exodus

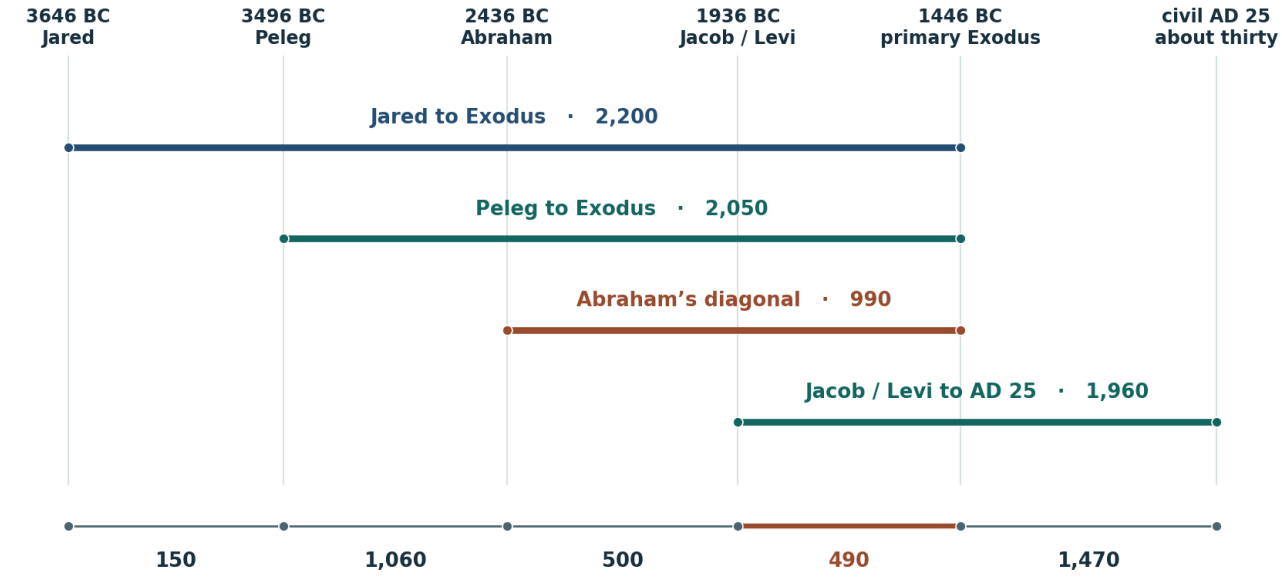

Genesis names Peleg for the division in his days. From cumulative Enoch at 8496 BC the first 5,000 years reach Peleg at 3496 BC. Another 2,000 reach Judah’s Exodus at 1496 BC, completing the 7,000 side. Another 2,900 reach the primary Conquest Mirror, civil AD 1405, completing the 9,900 diagonal. Shem → Jacob/Levi → restoration (5436 → 1936 → 536 BC) moves forward 1,940 years at all three points to Peleg → civil AD 5 → civil AD 1405. Both rows preserve 3,500 + 1,400.

The two 3,500s **share the actual years from Peleg to Jacob/Levi**. File 22 already reads those 1,560 years as twelve times Jacob’s age of 130 at the descent into Egypt, followed by 490 to the primary Exodus. Regular Rounded Jared stands 150 years before Peleg. Within Jared’s 2,200, Aaron-line Abraham at 2436 BC begins the 990-year working diagonal on side 700. Jacob/Levi divides it into 500 + 490. **The same 1936–1446 BC interval closes Jared’s and Abraham’s measures and opens Jacob’s four 490s to AD 25.**

Rounded Lamech at 3236 BC divides the Peleg–Jacob interval into 260 + 1,300. He closes Shem’s 2,200 and leaves 2,700 to restoration. His position three quarters along Enoch’s side belongs to his distinct, Exodus-held projection at 3246 BC.

The shared 490 years at the primary Exodus

Columns mark the same dates in every row. The spacing is schematic.

The Conquest Mirrors and Christ’s ministry

Enoch’s closing 2,900 joins **Judah’s Exodus to the primary Conquest Mirror**. Move both boundaries 50 years later and Jared’s 2,900 joins **the primary Exodus to Judah’s Conquest Mirror**. With the Exodus at 1446 BC held fixed, projected Creation at 4346 BC and civil AD 1455 are each 2,900 years away. The same 5,800 divides at the calculated 2946 BC into a 1,400 diameter plus a 4,400 circumference. All AD labels here are civil. A crossing counts BC + AD − 1.

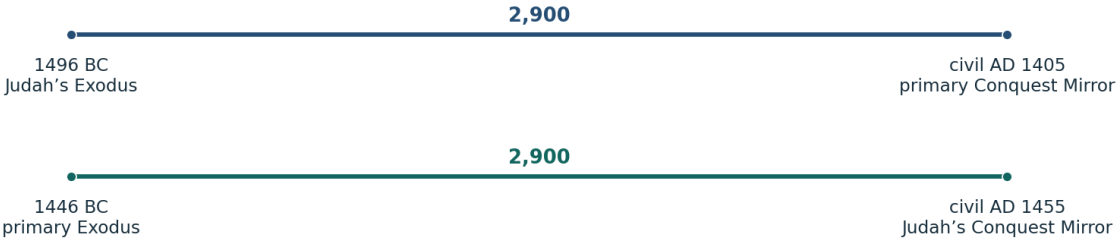

A second translation reaches Christ’s ministry datum. Move **Peleg → Judah’s Exodus → the Mirror of 6 BC** forward 20 years. All three boundaries land on dates already in File 68, its 3476 BC schematic head, Joshua’s birth at 1476 BC and civil AD 25. Both rows measure **2,000 + 1,500 = 3,500**. Joshua’s thirty years to the Exodus and the thirty from 6 BC to AD 25 also translate together by 1,470. Matthew reads Israel’s Exodus in the life of Jesus. Luke says he began at *about thirty*. Exact elapsed years belong to the selected chronology.

At that same civil AD 25 endpoint, Noah’s 3,080 and Jacob/Levi’s 1,960 give **11/7**, the working semicircumference-to-diameter ratio. The opening circle thus returns at the close. The missing dated division lies earlier, inside Enoch’s 5,000. The next test is whether an independently sourced event on the selected chronology occupies **6296 BC** (2,200 then 2,800) or **5696 BC** (the reverse order).

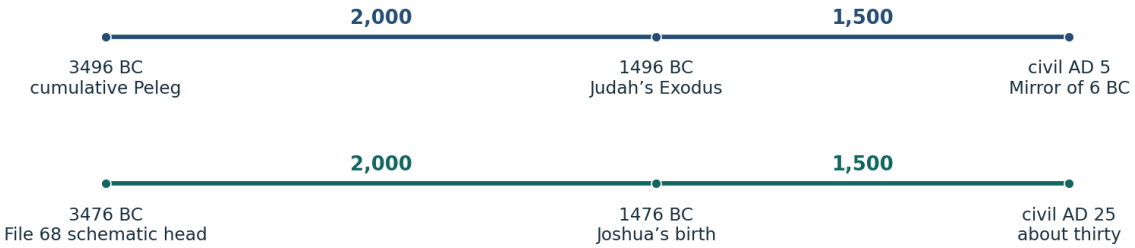

Two translations across the BC/AD boundary

Labels use civil AD. Each paired row begins and ends later by the amount shown.

50 years later · the two Conquest Mirrors

20 years later · Peleg’s half-side reaches the ministry datum
