Enoch and Luke’s Creation across the Mirror

Two 11,000-year diameters on a common axis. Christ at 6 BC is the origin.

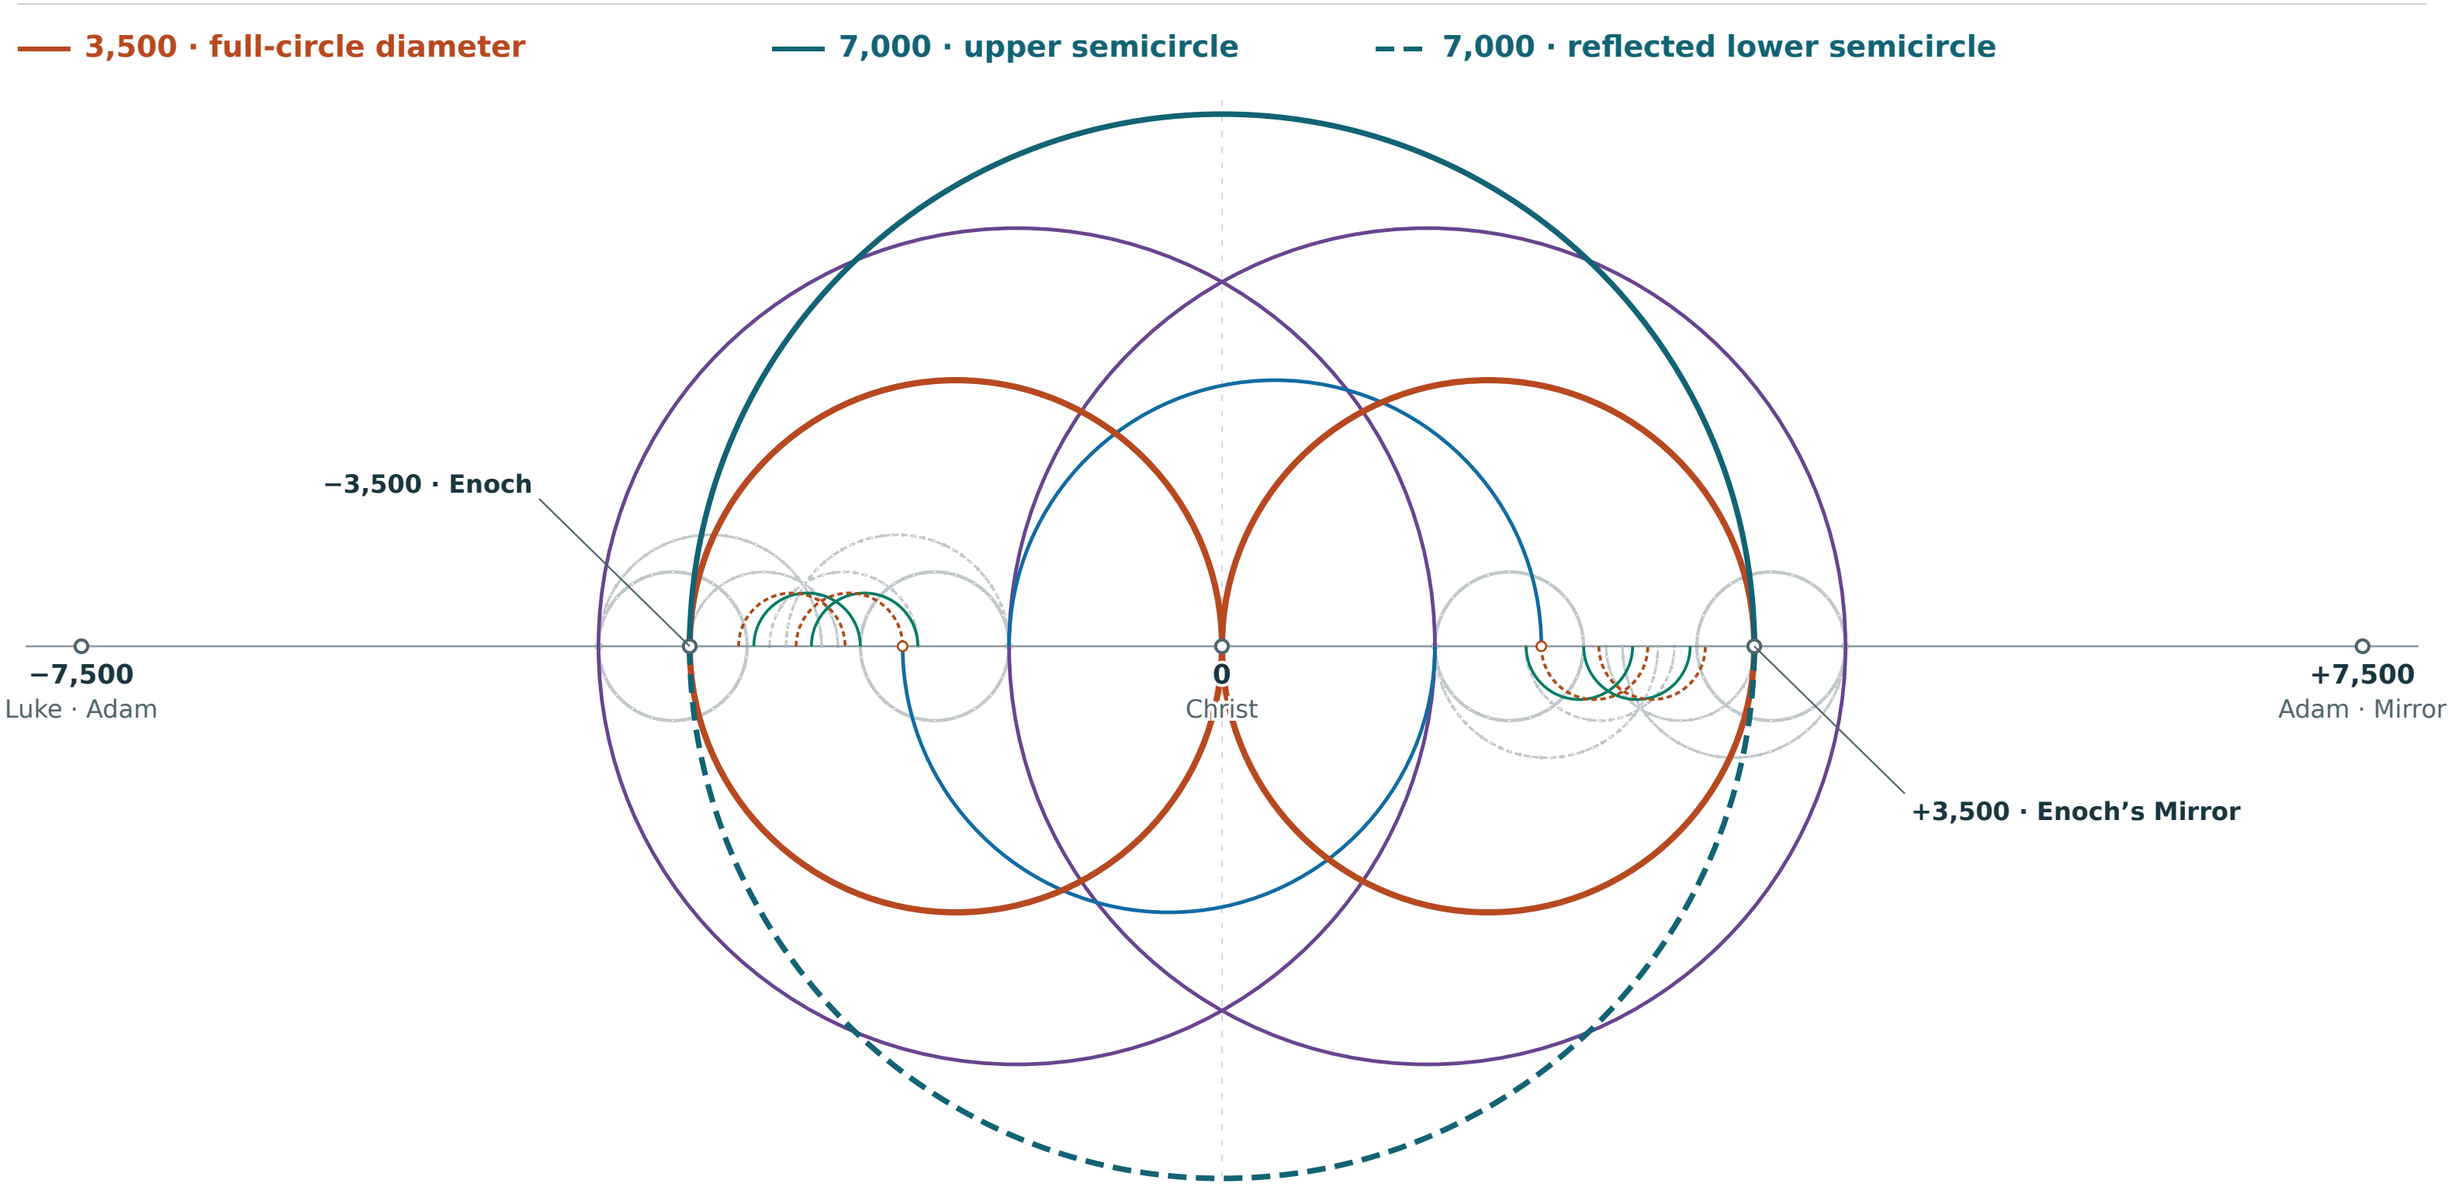

The two scales

At 22/7, the inner 3,500-diameter circle and 7,000-diameter semicircle each trace 11,000 years.

An outer diameter is 11,000 years. Its highlighted half-turn measures about 17,286 years at 22/7.

Luke’s 11,000 years across the Rounded MT Mirror

Enoch to Christ supplies the full-circle diameter. Enoch to his Mirror supplies the semicircle diameter.

Signed elapsed years

Each span measures 11,000. The midpoints mark Shelah endpoints.

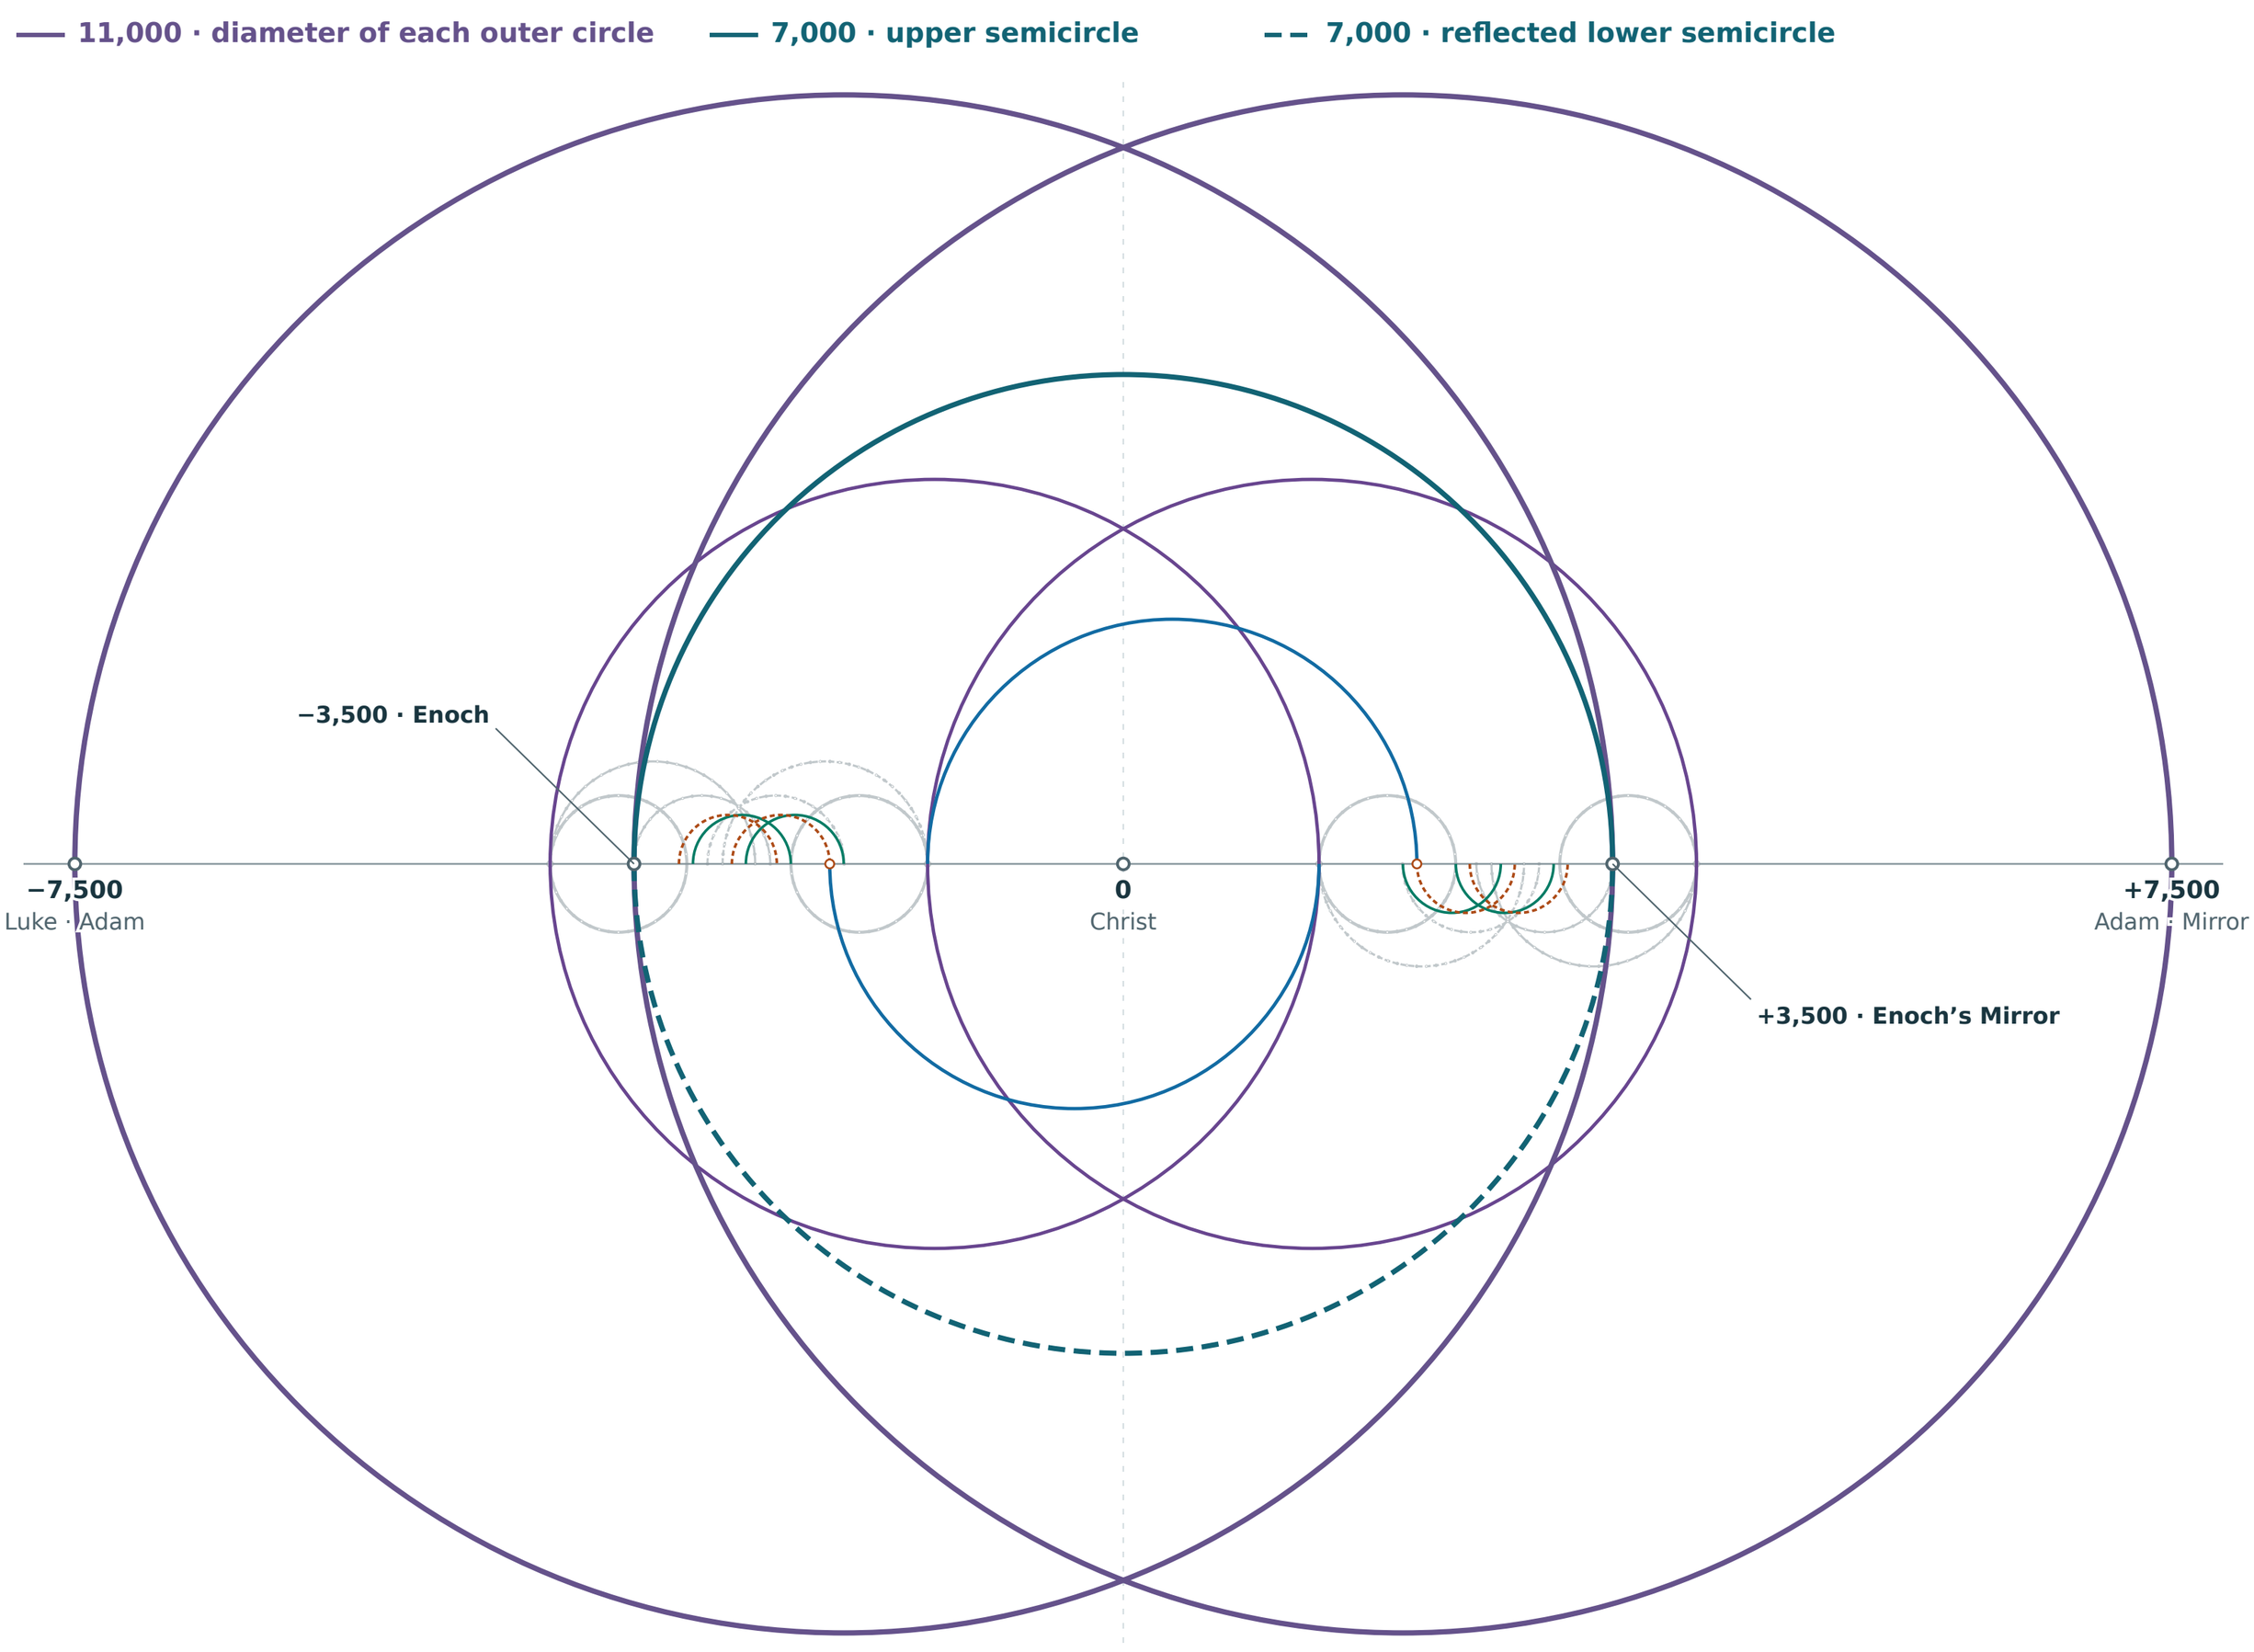

At 22/7, one orange full turn and one blue half-turn each measure 11,000 years.

The MT underlay retains the violet circles, blue arcs, and the Cainan (rust) and Shelah (green) semicircles at Terah.

The two 11,000-year spans as diameters

Each outer circle joins Luke’s Adam to the opposite Enoch opening. Its center marks a Shelah endpoint on the date ruler.

Signed elapsed years

Each span measures 11,000. The midpoints mark Shelah endpoints.

The outer diameters are the straight 11,000-year spans. Each blue half-turn measures 11,000 under 22/7.

The MT underlay retains the violet circles, blue arcs, and the Cainan (rust) and Shelah (green) semicircles at Terah.
