The Rounded MT trunk across the Mirror

Each Creation–Conquest span covers 2,700 years. The interval between the two Conquest poles covers 2,800.

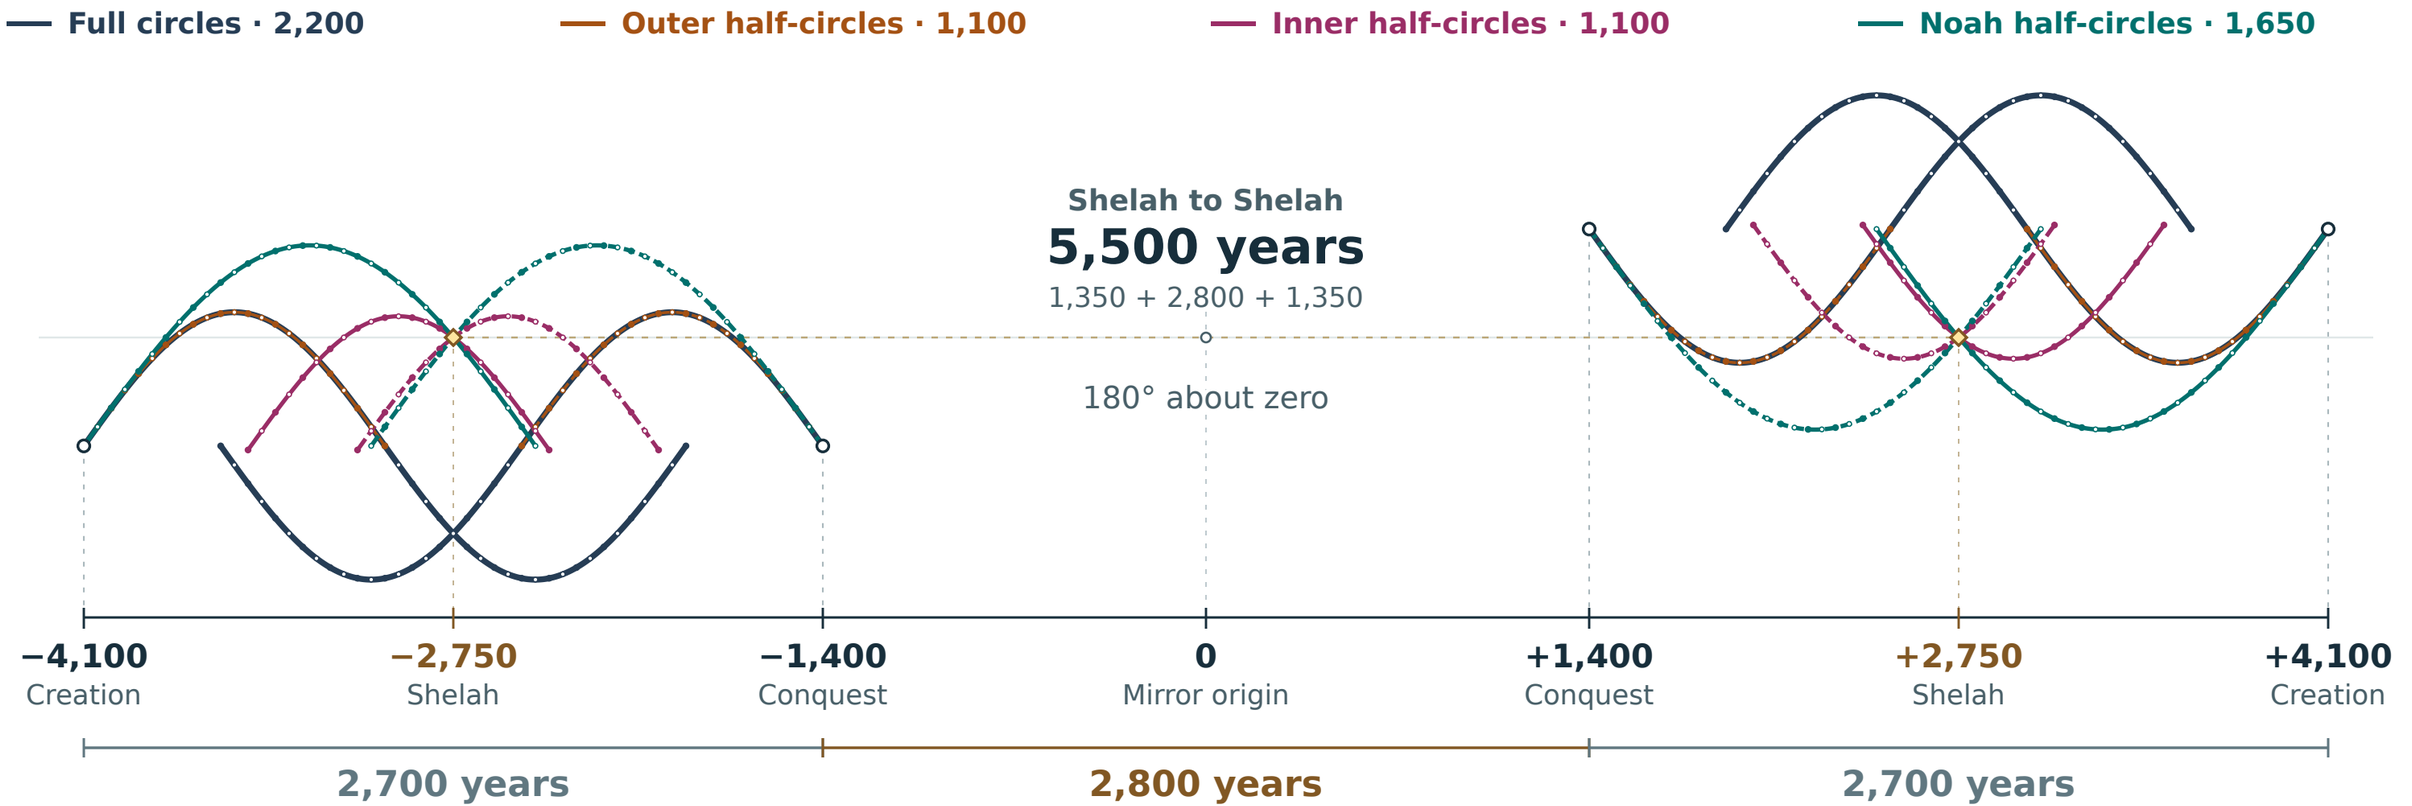

Creation, Conquest and Shelah align with the straight ruler. Within each circle, read elapsed years along the arc.

Each side combines the schematic generations with the regular Rounded MT sequence of 1,050 + 600 + 1,050 years.

Reading every node on the signed-date axis

The same eight paths on each side, unfolded horizontally in elapsed time.

Every node now sits at its signed date. Each curve retains the height it had on the circle plate.

The source sequence runs from −4,100 to −1,400. A half-turn about zero gives the positive-side sequence.
