Shelah’s 5,500-year span across the Mirror

27 schematic centuries with second Cainan · Regular Rounded MT Noah and Flood · True arc lengths

Signed dates	Creation	Noah born	Shelah’s midpoint	Flood	Conquest
Source side	**−4,100**	**−3,050**	**−2,750**	**−2,450**	**−1,400**
Reflected side	**+4,100**	**+3,050**	**+2,750**	**+2,450**	**+1,400**

The 2756 BC crossings are placed on the horizontal line. Dates within each motif are read along the curves.

Signed date = 6 − BC year on the source side. Reflected dates reverse the sign. One geometric unit equals one year of arc travel.

The earlier Cainan midpoint gives −2,850 to +2,850 = 5,700, which exceeds five 1,100-year arcs by 200.
