Cainan and Shelah on the staggered Mirror

The older arcs keep their separate baselines. The four across-Mirror diameters lie on the line through zero.

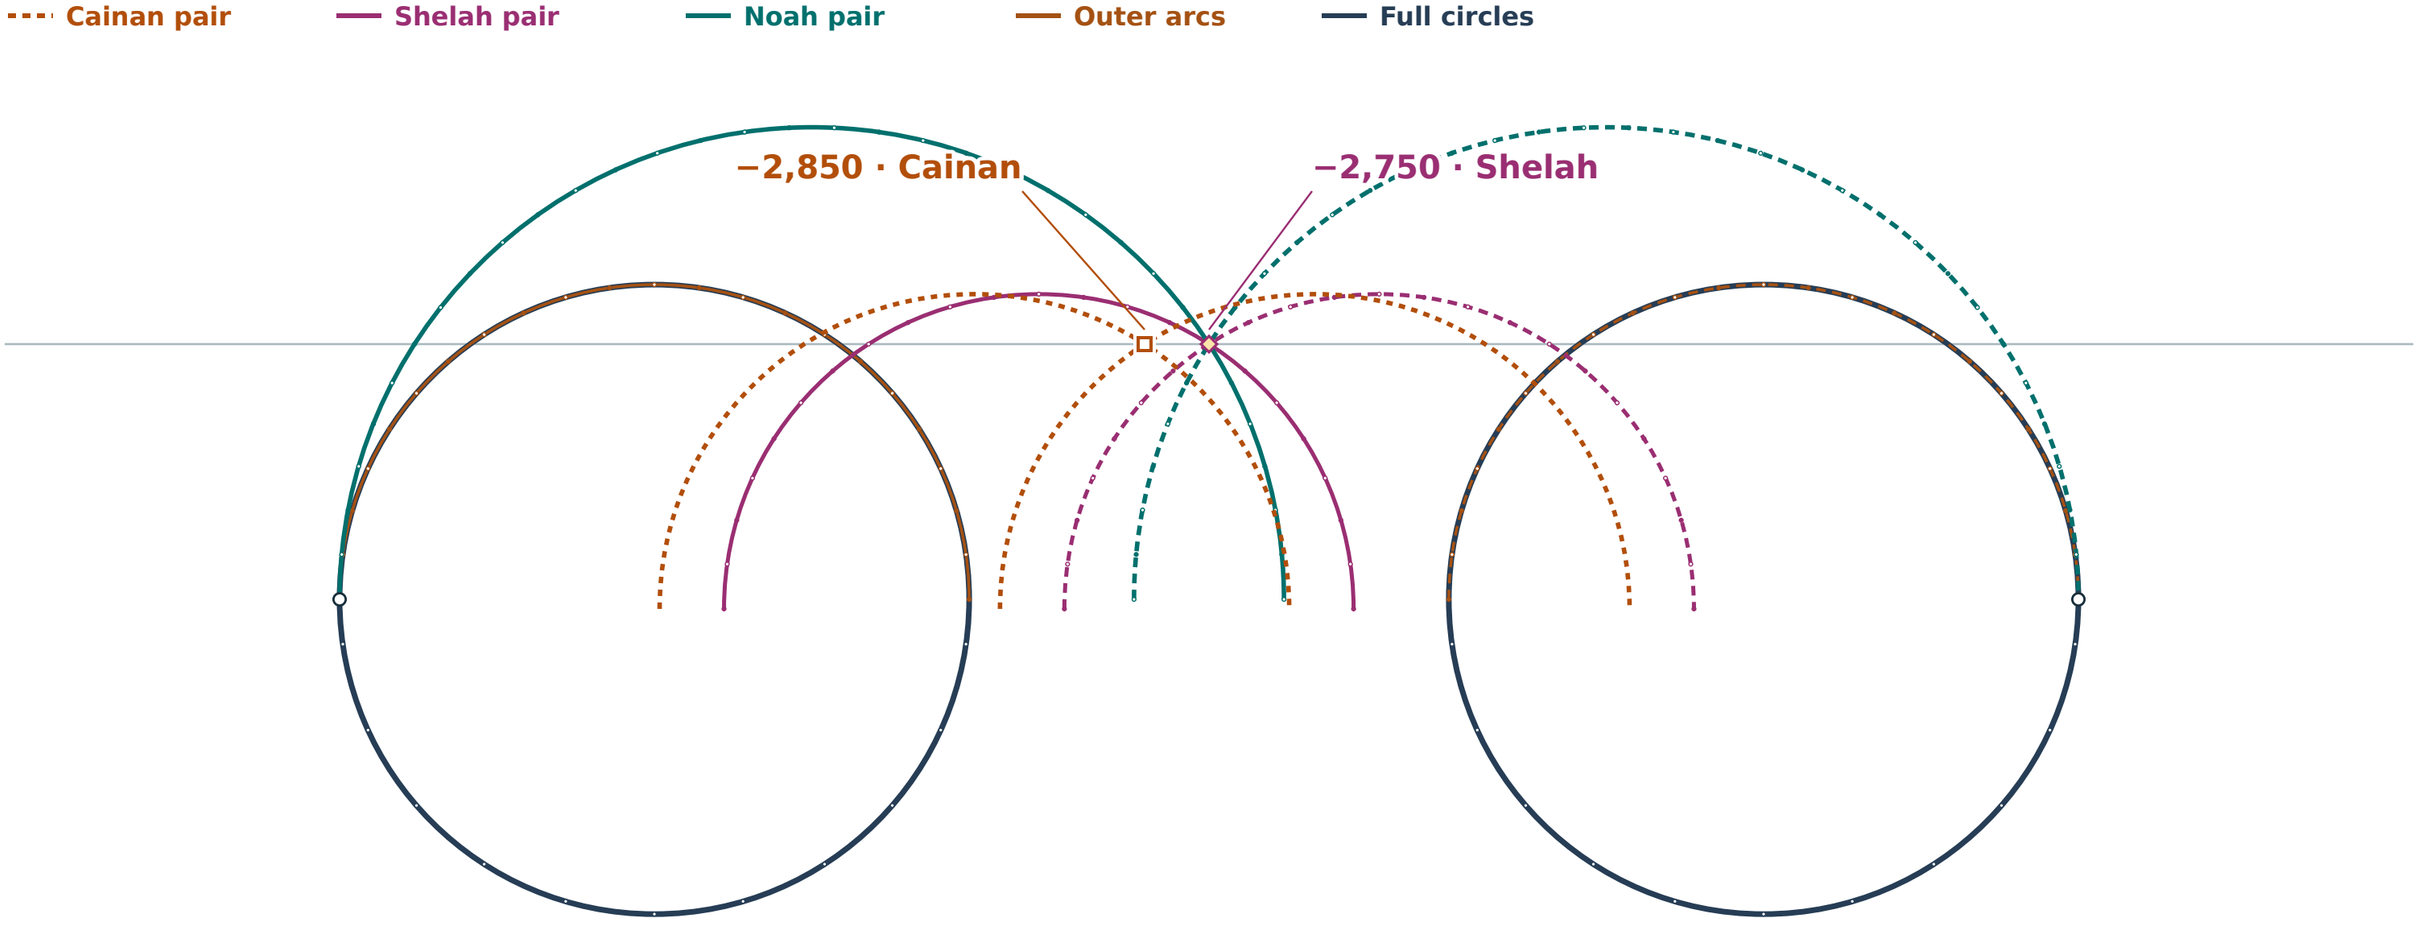

Square marks Cainan’s crossing. Diamond marks Shelah’s crossing with the Noah pair.

Dates on the small curves are read along their arcs. Terah’s arc date and the large semicircle’s endpoint occupy different heights.

Two dated crossings on the Creation side

The Cainan pair repeats the Shelah pair 100 years earlier. Both crossings lie on the same horizontal line.

The other side is a half-turn about zero. Dates on the smaller curves are measured along their arcs.
